--- Key Components and Data Within the AFM

Limitations and Operating Envelope The AFM's limitations section defines the safe operational boundaries for the King Air 350. These include maximum takeoff weight (MTOW), maximum landing weight, and allowable speeds such as Vne (Never Exceed Speed), Vso (stall speed landing configuration), and Vno (Maximum Structural Cruising Speed). Adherence to these limits is mandatory to prevent structural damage or loss of control. For example, the King Air 350 typically has an MTOW of approximately 15,000 pounds, with specific speed restrictions to maintain structural integrity. The AFM also provides limitations related to icing conditions, ensuring pilots operate within safe margins when encountering adverse weather.

Performance Charts Performance data in the AFM enables pilots to plan flights effectively. Charts for takeoff and landing distances consider variables like aircraft weight, runway conditions, altitude, temperature, and wind. By inputting these parameters, pilots can determine required runway lengths and verify that the aircraft can operate safely from a given airfield. Similarly, climb performance charts guide pilots on expected rates of climb at various weights and altitudes, essential for obstacle clearance and fuel planning.

Emergency Procedures and Checklists In high-stakes scenarios, quick reference is vital. The AFM provides concise, step-by-step procedures for emergencies such as engine failures, fire outbreaks, or cabin depressurization. These checklists are designed for rapid deployment, minimizing pilot response time and ensuring systematic handling of critical situations.

Systems Description and Limitations A thorough understanding of onboard systems is essential for troubleshooting and maintenance. The AFM details the aircraft's electrical systems, hydraulic systems, fuel management, and avionics architecture. It specifies operational limits, such as maximum hydraulic pressures or electrical loads, ensuring systems are operated within safe bounds.
